Iranian Pomegranates

SAVEH

NEYRIZ

FERDOWS

YAZD

BADRUD

Five distinctive profiles from Iran — selected for fruit size, skin and aril colour, sweetness, acidity and seed texture.

FIVE PROFILES, NOT ONE PRODUCT

Iran does not grow one pomegranate.

Iran is home to a diverse range of commercial pomegranates, offering different combinations of fruit size, skin colour, aril colour, sweetness, acidity and seed texture.

Our selected varieties represent five distinct product profiles — from deep-red, balanced sweet-tart fruit to exceptionally large and sweet pomegranates.

OUR FIVE VARIETIES

SAVEH

Deep red, large and balanced. The established Iranian export pomegranate, and the reference point for the other four.

DEEP RED
LARGE · SWEET-TART

NEYRIZ

The size variety. Red to crimson, firm and thick-skinned, with the highest soluble solids in the range.

CRIMSON
LARGE / XL · SWEET-TART

FERDOWS

Large red fruit with a wide aril-yield range and a firm structure built for distribution.

RED
LARGE · BALANCED

YAZD

The outlier. Very large, sweeter, lighter in skin, and the highest aril and juice yields of the five.

LIGHT RED
VERY LARGE · SWEET

BADRUD

The versatile commercial profile. Medium-large, firm, balanced, and the easiest of the five to place.

RED
MEDIUM-LARGE · BALANCED

SAVEH

Deep red. Balanced. Export ready.

300–450_g

FRUIT WEIGHT

18–19^{°Bx}

SOLUBLE SOLIDS

55–62%

ARIL YIELD

SIZE	Large
SKIN COLOUR	Red to deep red
ARIL COLOUR	Red to deep red
TASTE	Sweet-tart

JUICE YIELD	Approx. 38–43 %
SEED TEXTURE	Medium
SKIN	Firm / relatively thick
IDEAL FOR	Premium fresh · retail · wholesale · export

WHY SAVEH

- Deep-red appearance
- Large commercial fruit
- Suited to long-distance distribution
- Balanced flavour
- Firm skin

NEYRIZ

Large fruit. Strong colour. Distinctive character.

440–550_g

FRUIT WEIGHT

18–18.5 °Bx

SOLUBLE SOLIDS

ARIL YIELD

SIZE Large / extra large

SKIN COLOUR Red to crimson

ARIL COLOUR Red to crimson

TASTE Sweet-tart

JUICE YIELD Approx. 39–41 %

SEED TEXTURE Medium-firm

SKIN Firm / thick

IDEAL FOR Premium retail · fresh market ·
wholesale · export

WHY NEYRIZ

- Exceptional fruit size
- Strong red colour
- Highest soluble solids in the range
- Firm fruit structure
- Premium visual presentation

FERDOWS

Large. Red. Naturally balanced.

350–490_g

FRUIT WEIGHT

≈ 18[°]Bx

SOLUBLE SOLIDS

SKIN COLOUR Red

ARIL COLOUR Red

TASTE Sweet-tart

JUICE YIELD Approx. 40–50 %

SEED TEXTURE Medium-firm

SKIN Firm / thick

IDEAL FOR Fresh retail · wholesale ·
foodservice · export

WHY FERDOWS

- Large fruit
- Attractive red colour
- Balanced flavour
- Good aril yield
- Firm skin

YAZD

Exceptionally large. Naturally sweet.

Photograph illustrative. Yazd is the one variety here with no dedicated photography on file — and the one sold on being visibly larger and lighter in skin colour than the rest.

370–700_g

FRUIT WEIGHT

16–17[°]Bx

SOLUBLE SOLIDS

ARIL YIELD

SIZE Very large

SKIN COLOUR Red to light red

ARIL COLOUR Red

TASTE Sweet to sweet-tart

JUICE YIELD Approx. 45–58 %

TITRATABLE ACIDITY Approx. 1.3–1.4 %

SEED / SKIN Medium seed · relatively thin skin

IDEAL FOR Premium retail · fresh consumption · foodservice · fresh-cut

WHY YAZD

- Very large fruit
- Sweet eating profile
- A distinct alternative to the tart varieties
- High aril yield
- High juice yield

BADRUD

Red. Balanced. Commercially versatile.

IDEAL FOR Retail · wholesale · foodservice · export

WHY BADRUD

- Attractive red appearance
- Balanced flavour
- Versatile fresh-market profile
- Good aril yield
- Firm fruit structure

The aril is the product.

Yield, colour and seed texture are what a buyer is really specifying.
Everything on the next three pages is a way of comparing those.

Find the right Iranian pomegranate.

Different markets look for different characteristics. These five provide distinct profiles rather than a single standard pomegranate.

	SAVEH	NEYRIZ	FERDOWS	YAZD	BADRUD

MARKET POSITION	Premium / export	Premium / export	Export / fresh	Sweet / premium	Fresh / export

Deep-red aril colour.

The lighter end of the aril range.

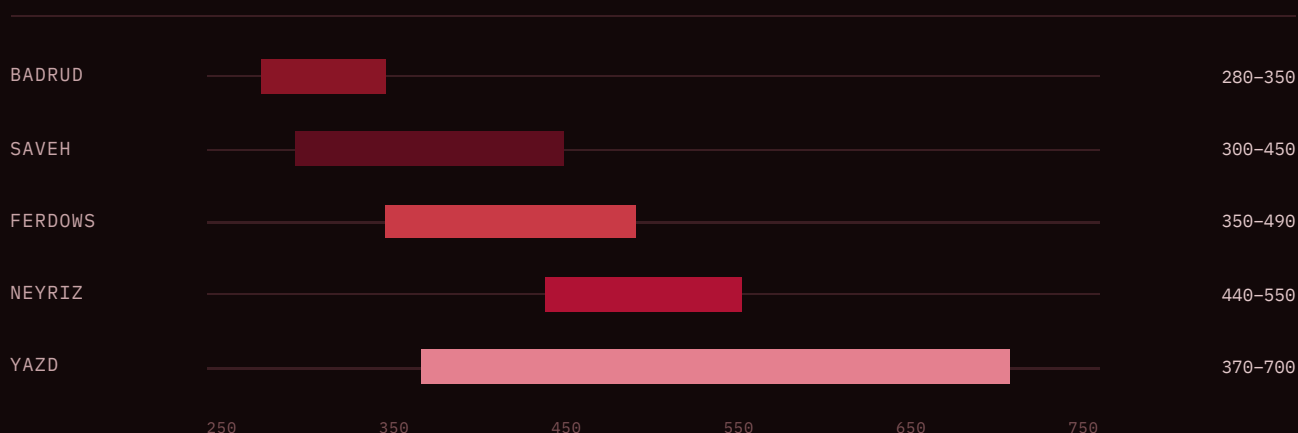

Fruit in hand, for scale.

Bold values mark where a variety leads the range on that characteristic. Figures describe commercial profiles and are confirmed per lot and season.

WEIGHT AND BRIX, PLOTTED TOGETHER

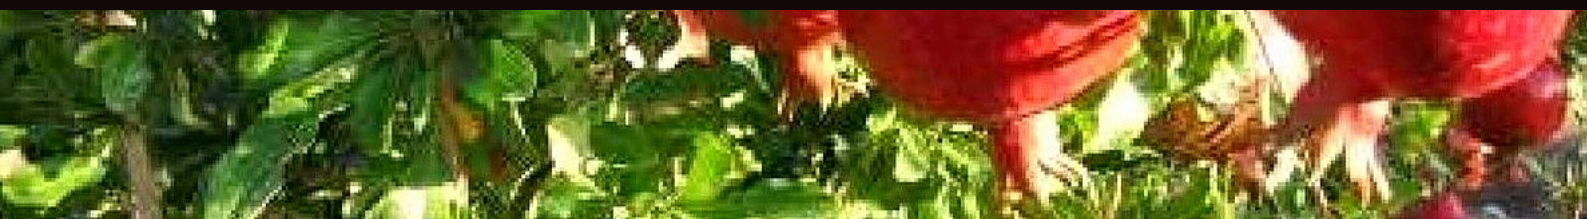

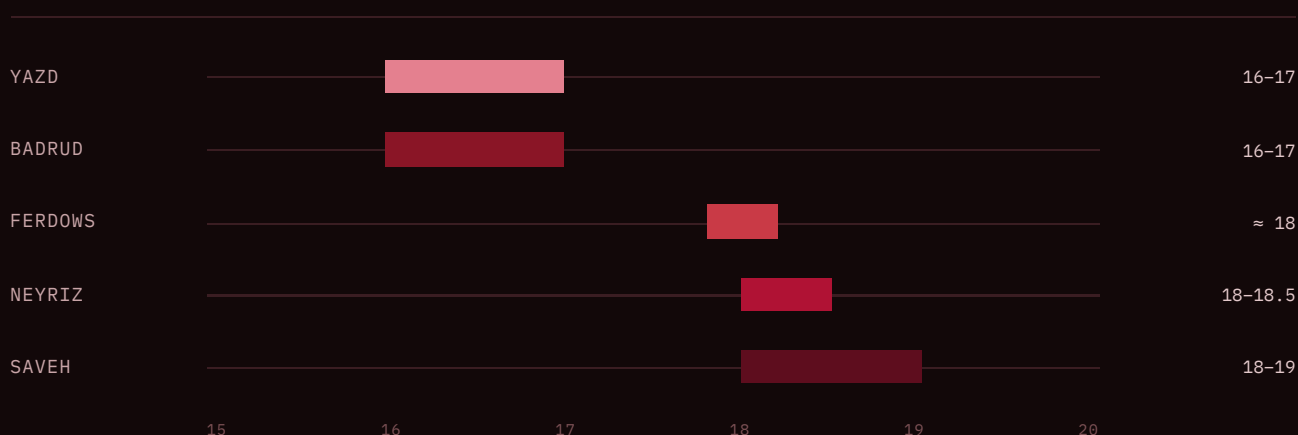

Fruit weight

GRAMS

Soluble solids

°BRIX

Fruit weight is set on the tree. Grading sorts what the orchard produced; it does not create the top of a variety's range.

YAZD SPANS THE WIDEST WEIGHT RANGE

370–700 g is nearly double from the bottom of the range to the top, which makes calibre selection more consequential for Yazd than for any other variety here.

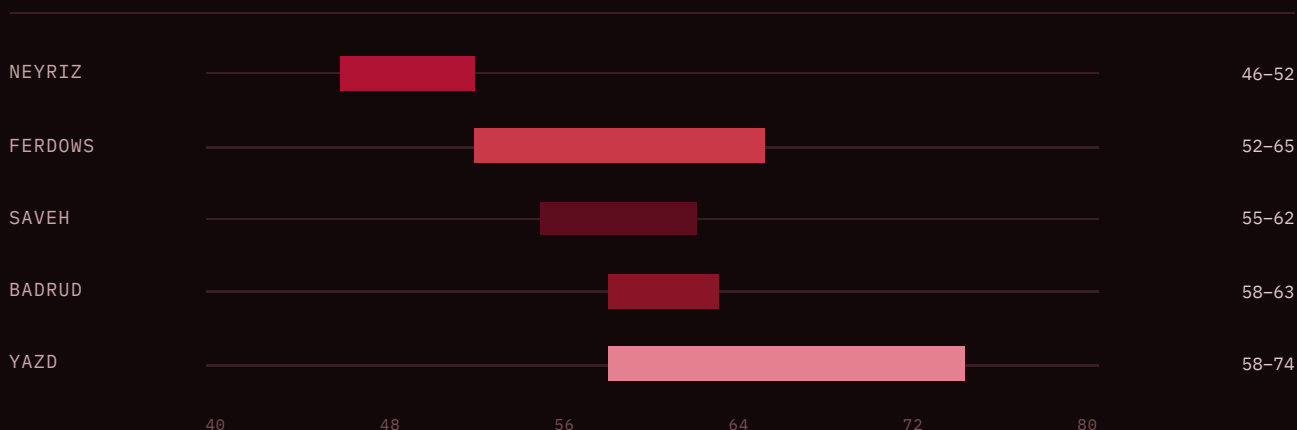

SUGAR SPLITS THE FIVE IN TWO

Saveh, Neyriz and Ferdows sit at or above 18 °Brix. Yazd and Badrud sit at 16–17. That gap is the clearest dividing line in the range.

WHAT YOU GET OUT OF THE FRUIT

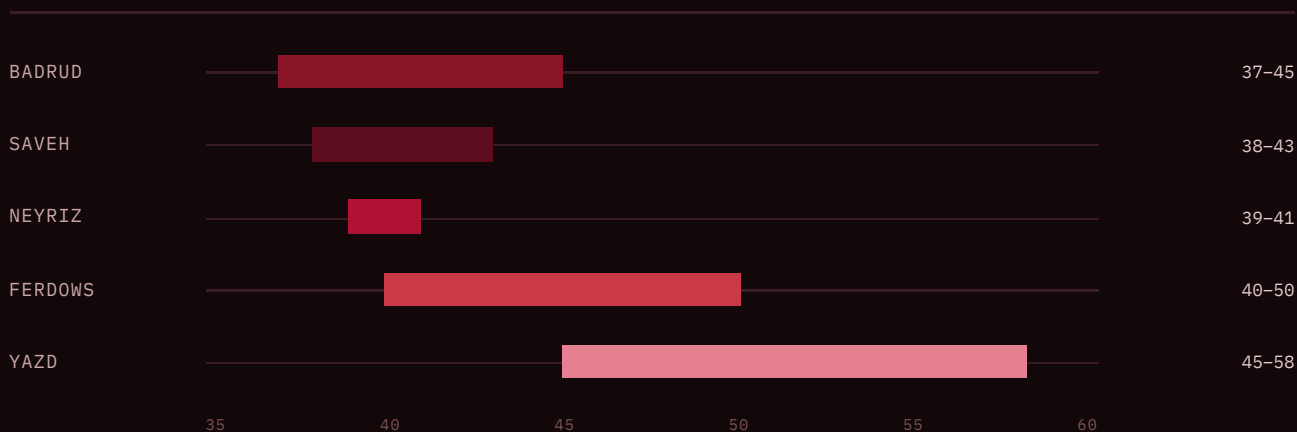

Aril yield

% OF FRUIT

Juice yield

% OF FRUIT

WHAT THE PERCENTAGES ARE

Aril yield is the share of the whole fruit that is edible aril; juice yield is the share that presses out. Both are measured on the fruit, not estimated from its size — which is why a large variety does not automatically lead on either.

YIELD IS WHERE YAZD EARNS ITS PLACE

Highest on both aril and juice yield. For fresh-cut and juice programmes that is worth more than the two Brix points it gives away.

NEYRIZ TRADES YIELD FOR SIZE

The lowest aril yield of the five, and the largest, firmest, thickest-skinned fruit. It is bought for presentation, not for processing.

Five profiles. Start here.

SAVEH

FOR SWEETNESS & HIGH ARIL YIELD

BADRUD

FOR A BALANCED COMMERCIAL PROFILE

Tell us the market and the format and we will propose the variety — or the two varieties that split the season between them.

SIZED TO THE ORDER, NOT TO A FIXED TABLE

We do not publish a fixed calibre. For the European market, size can be specified by fruit count, by diameter or by individual fruit weight — and the UNECE standard for pomegranate separates size codes by weight.

301–400 g

A UNECE size code for pomegranate, given as an example of weight-based sizing.

401–500 g

The band most of the large-fruited varieties in this range fall into.

≥ 501 g

Reachable by Neyriz and Yazd at the top of their weight ranges.

PACKING

According to buyer requirements

PACKAGING

Cartons · export boxes · retail-ready formats

NET WEIGHT

According to buyer specification

PACKED

Netted individually, single layer. The net is what carries a large, thin-skinned pomegranate through handling without pressure marking.

Sizing is defined with the order rather than published as a fixed table, because the five varieties do not share one weight distribution.

QUALITY THAT TRAVELS

Fruit is selected on appearance, maturity, size, colour and overall commercial quality, and handled to hold that condition through the supply chain.

QUALITY FOCUS

- Uniform appearance
- Commercial maturity
- Attractive skin colour
- Sound fruit structure
- Export-oriented grading
- Buyer-specific calibre selection

Fruit cut at intake. Aril colour and maturity are checked on the lot, not inferred from the outside of the fruit.

Colour is carried off the tree. Selection begins there.

Netted and stacked for transport.

EU MARKET ACCESS

European market access requires compliance with applicable EU requirements, including pesticide-residue limits and marketing standards. European buyers may impose requirements **stricter than the statutory EU MRLs** — so these are treated as part of the export specification for each buyer, not as a generic catalogue claim.

ORIGIN

Five varieties, five places.

Saveh, Neyriz, Ferdows, Yazd and Badrud are growing regions before they are variety names — which is why they taste and size differently.

IRANIAN POMEGRANATES · FIVE VARIETIES · EU MARKET

TELL US THE MARKET. WE WILL NAME THE VARIETY.

Figures in this catalogue describe commercial profiles for the five selected varieties and are confirmed per lot and season. Calibre and packing are defined with each order.
