

COMPANY PAPER • 2026

Sourced across Iran. Shipped under one contract.

PAYA ORIGIN is an agricultural sourcing and export company. We identify producers across Iran's growing regions, verify what they grow, prepare it for its destination market, and ship it under a single contract — dried fruits and nuts, fresh fruit, and fresh vegetables.

15+

Years in the trade

Sourcing, quality control and export operations for Iranian agricultural products.

05

Sourcing regions

Kerman, Khorasan, Fars, Mazandaran, Azerbaijan — each chosen for a crop.

03

Product categories

Dried fruits & nuts · fresh fruits · fresh vegetables.

04

Priority markets

Middle East · Russia & CIS · India · Europe.

ONE

Point of accountability

One counterpart from producer selection to delivered shipment.

A single, accountable partner between farm and buyer.

MODEL · ORIGINS · MARKETS

The company was built for export from the beginning rather than adapted to it. Decisions start from a buyer's specification — product, grade, volume, packaging, destination — and work backwards to the orchard or field best able to meet it.

FROM REQUIREMENT TO RELIABLE SUPPLY

- 01 Understand**
 Product, grade, quantity, destination market and delivery window recorded as a written specification.
- 02 Curate**
 Region matched to crop, producer matched to specification — with a second option held in reserve.
- 03 Verify**
 Checked at supplier assessment, again during procurement, and again before loading. Quality is not a final inspection.
- 04 Prepare**
 Cleaned, sorted, packed, labelled and palletised for the destination market's rules — our brand or your private label.
- 05 Deliver**
 Documentation, customs and freight coordinated under the same contract.

IRAN IS NOT ONE ORIGIN

- 01 Azerbaijan** — grapes · apple · walnut · raisin
- 02 Mazandaran** — kiwi · citrus · fresh fruit
- 03 Khorasan** — saffron · barberry
- 04 Kerman** — pistachio · dates
- 05 Fars** — pomegranate · dates · citrus · grapes

MARKET 01

Middle East

Short lead times and established freight routes; the most direct market for fresh produce.

MARKET 02

Russia & CIS

Volume buyers for fresh fruit and vegetables, working on rolling seasonal programmes.

MARKET 03

India

A long-standing destination for Iranian dried fruit, nuts and dates.

MARKET 04

Europe

The most exacting specification: EU marketing standards, MRL compliance and full traceability.

Five origins currently active in the sourcing network; regions are added when a buyer's specification calls for them. Positions are provincial reference points, not producer locations.

Fresh fruit & vegetables

CATEGORY 01 & 02 OF 03

Iran's climate range means the fresh season does not close in autumn. Between the Caspian belt and the southern valleys the country supplies across most of the calendar — and protected cultivation makes vegetables a year-round programme rather than a season.

Grape

AZERBAIJAN · JUL-OCT

Pomegranate

FARS · SEP-NOV

Kiwi

MAZANDARAN · OCT-DEC

Peach

FARS · JUN-AUG

Melon

CENTRAL IRAN · JUN-SEP

ALSO SOURCED

Apple · watermelon · plum · citrus · seasonal varieties by harvest calendar.

SPECIFIED BY

Variety, size and colour grade, Brix where relevant, and pack count.

HANDLED AS

Cold chain from packhouse to port; carton and tray formats matched to the market.

Fresh vegetables

Greenhouse production runs through the year, which makes vegetables the category where continuity — not season — is the commercial point. Volumes are contracted as a rolling programme with agreed weekly or monthly quantities.

01 Bell pepper

Greenhouse-grown across colour grades, year-round with a cooler-season peak.

Bell pepper, sorted by colour grade before packing.

02 Tomato

Greenhouse and open-field by variety and grade, including processing formats.

03 Seasonal produce

Cucumber, aubergine, courgette and others against the harvest calendar.

Fruit carton

VENTILATED · COLD CHAIN

Vegetable carton

GREENHOUSE PRODUCE

Dried fruits & nuts

CATEGORY 03 OF 03

The category Iran is known for. Long harvest-to-export experience, established processing capacity, and grading conventions that international buyers already recognise.

Pistachio

KERMAN · SEP-OCT · THE SIGNATURE EXPORT

Grown on the arid Kerman plateau, where the day-to-night temperature swing drives shell split and kernel fill. Supplied by variety and calibre — Akbari, Ahmad Aghaei, Kaleh Ghouchi, Fandoghi — in-shell or kernel.

Saffron

KHORASAN · OCT-NOV

Dates

FARS · KERMAN · AUG-OCT

Walnut

AZERBAIJAN · SEP-OCT

Raisin

AZERBAIJAN · FARS · AUG-OCT

ALSO SOURCED

Dried fig · peanut · dried mulberry · sunflower seed · watermelon seed · dried plum.

SPECIFIED BY

Variety, calibre or size grade, moisture, defect tolerance and treatment.

PACKED AS

Bulk cartons and sacks for processors; retail units under our brand or your private label.

PACKED FOR THE MARKET IT IS GOING TO

Bulk export carton

NUTS & DRIED FRUIT · 10 KG

Retail presentation

SAFFRON & PREMIUM LINES

Format, count, labelling language and compliance marks change by destination, so they are agreed with the specification rather than after it — under the PAYA ORIGIN brand, your private label, or unbranded bulk for processors.

Five apple varieties, one export specification.

MALUS DOMESTICA · HS 0808.10

One sizing range, one class scheme and one carton programme across all five. The varieties differ in colour, texture and taste — which is what a buyer's inspector checks first — and they ripen in sequence, so five varieties become one autumn programme rather than five purchases.

	Gala / Royal Gala	Cream ground with bright red stripes, > 60 % red. Fine-grained, crisp and juicy; sweet with a mild tangy balance.	HARVEST LATE AUG — EARLY SEP FIRMNESS 5.8–6.0 KG
	Golden Delicious	Light green to very pale yellow, bluish under 10 %. Elongated, crisp and juicy; sweet and aromatic.	HARVEST MID/LATE SEP — OCT FIRMNESS 5.8–6.0 KG
	Red Delicious	Dark striped red, > 80 % coverage. Round to round-conical, fine-grained and tender; sweet and mild.	HARVEST LATE SEP — MID/LATE OCT FIRMNESS 5.8–6.0 KG
	Granny Smith	Bright green, bluish under 10 %. The firmest of the five and the one that travels and stores longest.	HARVEST LATE OCT — NOV FIRMNESS 6.3–6.5 KG
	Fuji	Red over a yellow-green ground. The sweetest eating profile of the five and the softest at harvest.	HARVEST MID/LATE SEP — EARLY OCT FIRMNESS 5.6–5.8 KG

CALIBRE

65 – 100 mm

FRUIT WEIGHT

80 – 180 g

CLASSES

Extra / I / II

COLD STORAGE

2 – 7 months

One sizing range across all five varieties; the reported weight bands are 80–120 g and 130–180 g. Storage at approximately –1 to +4 °C and 90–95 % RH. The sizing table is a working specification pending PAYA's own sorting data, Brix and firmness are indicative benchmarks, and the class definitions are to be aligned with UNECE FFV-50 before issue.

Three packing levels, all buyer-specific.

PACKING · PALLET · CONTAINER

The 10 kg carton is the standard Iranian export pack. Everything above and below it is built to the buyer's requirement — and the pallet follows the carton, the container follows the pallet. None of the three can be quoted before the first is fixed.

A

10 kg carton · bulk

Loose packed. The standard Iranian export format, reported consistently across commercial sources.

B

8.5 / 10 kg · wholesale

Tray or layer packing, or customer-specific. Plastic boxes at 8.5 and 13.5 kg are also reported by Iranian exporters.

C

Buyer-specific · retail

Retail carton, bag, tray or consumer pack to the customer's specification and artwork.

10 kg export carton, cell-packed. Board, count and artwork are agreed with the buyer.

WHOSE NAME IS ON THE BOX

PAYA ORIGIN brand — origin-marked, for a buyer with no packaging of their own.

Private label — your brand, artwork, market language and compliance marks.

Bulk & industrial — unbranded, for processors and repackers, specified by net weight.

Iran does not grow one pomegranate.

FIVE PROFILES · EU MARKET

The five selected varieties are five distinct product profiles — different combinations of fruit size, skin and aril colour, sweetness, acidity and seed texture. The buyer's question is which of the five, so the figures below are set out to be read against each other.

	Saveh	Deep red, large and balanced. The established Iranian export pomegranate and the reference point for the other four.	300–450 G · 18–19 °BX · ARIL 55–62 %
	Neyriz	The size variety. Red to crimson, firm and thick-skinned, with the highest soluble solids in the range.	440–550 G · 18–18.5 °BX · ARIL 46–52 %
	Ferdows	Large red fruit with a wide aril-yield range and a firm structure built for distribution.	350–490 G · ≈ 18 °BX · ARIL 52–65 %
	Yazd	The outlier. Very large, sweeter, lighter in skin, and the highest aril and juice yields of the five.	370–700 G · 16–17 °BX · ARIL 58–74 %
	Badrud	The versatile commercial profile. Medium-large, firm, balanced, and the easiest of the five to place.	280–350 G · 16–17 °BX · ARIL 58–63 %

SUGAR SPLITS THE FIVE

Saveh, Neyriz and Ferdows sit at or above 18 °Brix; Yazd and Badrud at 16–17. That gap is the clearest dividing line in the range.

YIELD IS WHERE YAZD WINS

Highest on both aril and juice yield. For fresh-cut and juice programmes that is worth more than the two Brix points it gives away.

HARVEST

Fars and central Iran, September to November. Figures describe commercial profiles and are confirmed per lot and season.

Sized to the order, not to a fixed table.

CALIBRE · QUALITY · EXPORT

We do not publish a fixed calibre. Size can be specified by fruit count, by diameter or by individual fruit weight — and the UNECE standard for pomegranate separates size codes by weight. The five varieties do not share one weight distribution, which is why the table is set with the order.

301–400 g

A UNECE size code for pomegranate, given as an example of weight-based sizing.

401–500 g

The band most of the large-fruited varieties in this range fall into.

≥ 501 g

Reachable by Neyriz and Yazd at the top of their weight ranges.

Net weight

According to buyer specification

Netted individually, single layer. The net is what carries a large, thin-skinned pomegranate through handling without pressure marking.

Fruit cut at intake. Aril colour and maturity are checked on the lot, not inferred from the outside of the fruit.

EU MARKET ACCESS

European market access requires compliance with applicable EU requirements, including pesticide-residue limits and marketing standards. European buyers may impose requirements **stricter than the statutory EU MRLs** — so these are treated as part of the export specification for each buyer, not as a generic catalogue claim.

Full pomegranate catalogue — five variety pages, weight and Brix plotted, aril and juice yield, comparison matrix.

POMEGRANATE CATALOGUE →

Hayward, from the Caspian belt.

ACTINIDIA DELICIOSA · EU MARKET

Kiwi is a Caspian crop, not an Iranian one. Hayward does not tolerate dry heat; Mazandaran and Gilan hold the humidity, the mild winters and the long autumn it needs. Harvested October to December, which is the northern hemisphere's own window.

QUALITY & GRADING

01 Three EU classes

Extra, Class I and Class II under the EU/UNECE marketing standard, separated by minimum fruit weight — 90 g, 70 g and 65 g.

02 Calibres 30 – 60

Calibre is the fruit count per package, so a lower number is a heavier fruit. Class follows weight, not preference: calibres 54 and 60 sit below the 70 g Class I floor and are declared Class II.

Hayward: green flesh, radial seed pattern, brown hairy skin.

03 6.2 – 9.0 °Brix at packing

Or 15–17 % dry matter. Either target on its own demonstrates commercial maturity; they are not cumulative.

04 Zero tolerance

Rot, visible mould, serious bruising and insect damage are not permitted at any class.

CALIBRE TO CLASS

CAL	WEIGHT	CLASS
30	≥ 125 g	Extra
33	115–124 g	Extra
36	105–114 g	Extra
39	95–104 g	Extra
42	88–94 g	Extra / I
45	80–87 g	Class I
48	73–79 g	Class I
54	68–72 g	Class II
60	65–67 g	Class II

Weight bands are indicative and confirmed against the packing-house calibration record for each lot.

CALIBRES

30 – 60

Where calibres are mixed across classes, the class is stated per calibre on the carton label — the declaration follows the lot's measured average weight, not the calibre number.

Cold chain, packing and compliance.

0 - 1 °C · 90 - 95 % RH

PACKING FORMATS

05 0 - 1 °C, 90 - 95 % RH

Pre-cooled to 0-2 °C before loading and shipped in a 40 ft reefer. **10 kg carton** — bulk format
Indicative shelf life 3-4 months under controlled storage.

5 / 5.5 kg carton — medium format

06 EU phytosanitary certificate

Mandatory for fresh **Actinidia** since September 2019, issued per destination country, alongside full EU MRL compliance.

500 g / 1 kg — retail format

1200 × 800 mm — pallet

07 Traceable to the lot

Orchard, packhouse, pack date and lot number carried on the carton label, so a consignment can be traced back rather than merely described.

Carton dimensions, cartons per pallet and cartons per container are left open in the technical specification and are confirmed per order rather than filled in with a plausible number.

Full kiwi specification — origin, quality, calibre-to-class reconciliation, maturity, residue and traceability.

[KIWI CATALOGUE →](#)

Tell us the market and the specification. We will name the origin.

Every figure in this paper comes from the corporate profile or from one of the three product catalogues, and each carries its own source's caveats rather than tidying them away. Full specifications, grades, packing formats and availability are set out in those documents and available on enquiry.
