

CORPORATE PROFILE · EDITION 2026

Trusted origins, curated for global markets.

An agricultural sourcing and export company connecting selected producers across Iran with international buyers.

We do not sell what is available. We build supply around what is required.

International buyers rarely struggle to find Iranian agricultural products. They struggle to find one accountable partner who selects the producer, verifies the quality, prepares the packaging and delivers the shipment.

PAYA ORIGIN exists to be that single partner — a curated sourcing chain running from a named region in Iran to a container arriving on schedule at your port.

01

A named origin

Every lot traces back to a region and a producer we have assessed ourselves.

02

A verified standard

Quality checked at three points, against the specification the order started with.

03

One counterpart

Sourcing, packing, documentation and freight under a single contract.

A single, accountable partner between Iranian farms and your business.

PAYA ORIGIN is an agricultural sourcing and export company. We identify producers across Iran's growing regions, verify what they grow, prepare it for its destination market, and ship it under one contract.

The company was built for export from the beginning rather than adapted to it. Our decisions start from a buyer's specification — product, grade, volume, packaging, destination — and work backwards to the orchard or field best able to meet it.

That order matters. It is the difference between offering a buyer what happens to be in a warehouse and building a supply chain that holds its shape across seasons.

WHAT WE ARE

A sourcing, quality and export partner working on behalf of the buyer.

WHAT WE ARE NOT

A farm, a broker of anonymous stock, or a one-shipment trader.

FIG. 01

Pistachio harvest at a selected orchard, Kerman province. Producers are visited and assessed before they enter the network.

A sourcing network built on experience, not guesswork.

15+

Years in agricultural trade

EXPERIENCE

Commercial experience across sourcing, quality control and export operations for Iranian agricultural products.

05

Sourcing regions across Iran

ORIGIN

Kerman, Khorasan, Fars, Mazandaran and the Azerbaijan provinces — each selected for a specific crop, not for convenience.

03

Product categories

RANGE

Dried fruits & nuts · fresh fruits · fresh vegetables — with packaging under our brand or your private label.

04

Priority export markets

MARKETS

Middle East · Russia & CIS · India · Europe. Commercial focus rather than an exhaustive list.

ONE

Point of accountability

STRUCTURE

A single contract and a single counterpart from producer selection through to delivered shipment.

Figures describe the company's commercial focus and sourcing footprint. Volumes, grades and lead times are confirmed per enquiry.

Regions listed are those currently active in the sourcing network and expand according to buyer requirements.

International sourcing is rarely a single transaction.

A buyer who wants ten tonnes of a specific grade, packed a specific way, arriving on a specific date, usually ends up coordinating four or five unrelated parties — and carrying the risk between them.

WITHOUT A COORDINATED PARTNER

Every hand-off removed is a point of failure removed. That is the entire commercial argument for how this company is structured.

WHAT FRAGMENTATION COSTS

Quality drifts

When no single party owns the standard, each lot is judged against a slightly different one.

Schedules slip

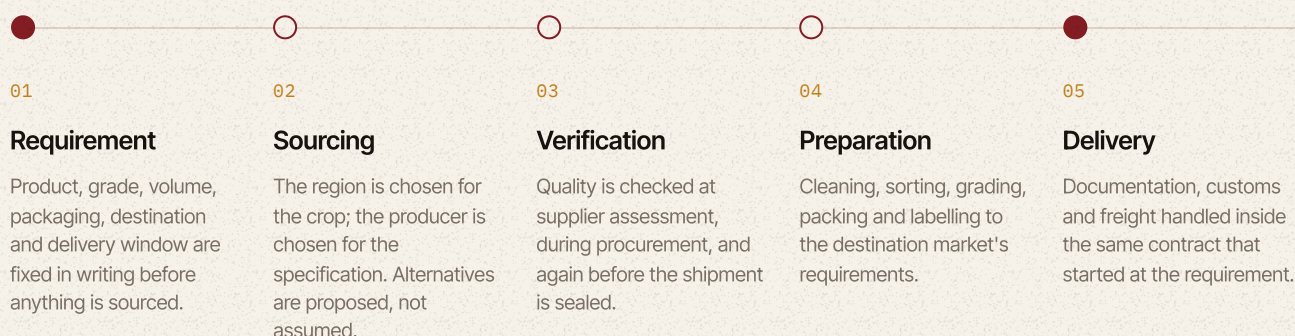

Production, packing and freight planned separately rarely meet on the date the buyer needs.

Nobody answers

When something goes wrong across five counterparties, the buyer absorbs it. That is the real cost.

From complexity to confidence.

One workflow, five stages, a single counterpart. Each stage produces something the next stage depends on — which is why we refuse to run them in parallel with different companies.

WHAT EACH STAGE PRODUCES

01	02	03	04	05
Written specification	Origin proposal	Inspection record	Packing & label spec	Document set
Signed before sourcing begins.	Producer options with trade-offs stated.	Evidence against the agreed grade.	Format, count, marks, pallet plan.	Certificates and shipping schedule.

PRINCIPLE

The requirement defines the sourcing strategy — never the other way round.

PRINCIPLE

Producers are selected and re-assessed. Being nearby is not a qualification.

PRINCIPLE

One coordinated partner replaces a chain of disconnected suppliers.

What we take responsibility for — and what we deliberately do not.

A clear boundary is more useful to a buyer than a long list of capabilities. This is ours.

WE DO

- 01 **Procurement against a written specification.** Grade, calibre, moisture, packing and tolerance agreed before sourcing begins.
- 02 **Producer identification and assessment.** Farms and processors evaluated across Iran's growing regions.
- 03 **Quality verification at three points.** Supplier assessment, procurement, pre-shipment.
- 04 **Packaging development.** PAYA ORIGIN brand or your private label, built for the destination market.
- 05 **Export documentation and freight.** Certificates, customs and shipment inside one contract.
- 06 **Season-over-season supply planning.** Continuity treated as the product, not the by-product.

WE DO NOT

- **Operate farms.** We select and supervise producers; we do not compete with them.
- **Sell anonymous commodity stock.** Every lot has a named region and a named producer behind it.
- **Depend on a single producer or region.** Alternatives are maintained for every active line.
- **Treat a shipment as the finish line.** A first order that does not repeat is a failed order.
- **Quote what we cannot verify.** If a specification cannot be met honestly, we say so.
- **Sell certification we do not hold.** Required certificates are arranged and named explicitly per shipment.

“Rather than selling available inventory, we build supply around the customer's requirement.”

PRINCIPLE 02

Producers are selected, not assumed.

The decision that determines a shipment's quality is made long before the shipment exists — in the choice of who grows it.

From requirement to reliable supply.

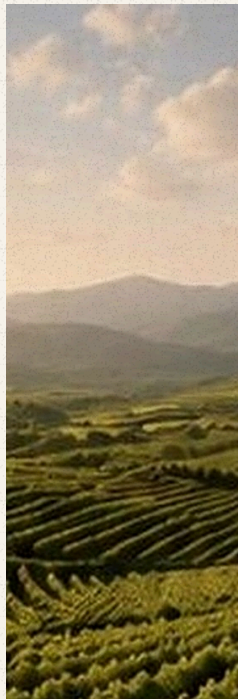

Five stages, each with a photograph of what it actually looks like. Every stage is designed to remove a specific uncertainty.

01

Understand

Product, grade, quantity, destination market and delivery window recorded as a specification.

02

Curate

Region matched to crop, producer matched to specification — with a second option held in reserve.

03

Verify

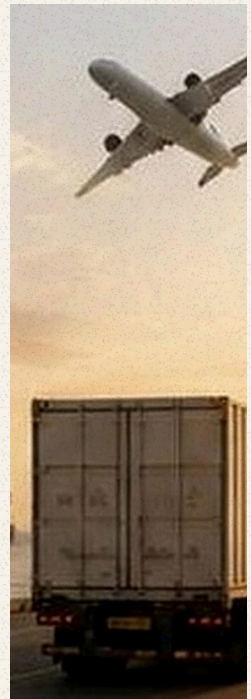

Checked at supplier assessment, again during procurement, and again before loading.

04

Prepare

Cleaned, sorted, packed, labelled and palletised for the destination market's rules.

05

Deliver

Documentation, customs and freight coordinated under the same contract.

WHAT THE BUYER RECEIVES

A written specification, named origin, and an agreed delivery window before any commitment.

WHAT WE HOLD

Producer relationships, quality records and the freight plan — in one place.

WHAT CHANGES EACH SEASON

Origins and harvest windows. The process around them does not.

Quality is not a final inspection.

A single check before loading can only reject a problem. Checking at three points prevents it — which is considerably cheaper for everyone involved.

CHECKPOINT 01

Before procurement

The producer is assessed — growing region, handling practice, processing capability and past consistency. A producer who cannot meet the specification is not asked to try.

CHECKPOINT 02

During sourcing

Lots are checked against the agreed grade as they are collected and processed — so a deviation is caught while it can still be corrected, not after packing.

CHECKPOINT 03

Before shipment

Pre-shipment inspection against the same written specification the order started with, together with the documentation the destination market requires.

FIG. 02 — Assessment recorded against the written specification, in the field.

TYPICALLY ACCOMPANIES A SHIPMENT

- Commercial invoice
- Packing list
- Certificate of origin
- Phytosanitary certificate
- Bill of lading or CMR
- Inspection report, where agreed

Exact document set depends on product, destination and the buyer's import requirements.

“A specification we decline is worth more to a buyer than a shipment that fails on arrival.”

Iran is not one origin. It is a set of them.

Climate, altitude and harvest window change completely between provinces. We source each crop from the region that grows it best — which is why the map matters more than the country name.

01	02	03	04	05
Azerbaijan	Mazandaran	Khorasan	Kerman	Fars
Grapes · apple · walnut	Kiwi · citrus · fresh fruit	Saffron · barberry	Pistachio · dates	Dates · citrus · grapes
AUG — OCT	OCT — DEC	OCT — NOV	SEP — OCT	AUG — NOV

Five origins currently active in the sourcing network. Additional regions are assessed and added when a buyer's specification calls for them. Positions are provincial reference points, not producer locations.

FIG. 03 — SELECTED ORIGINS

Why each region, and what it is good for.

REF	REGION	PRIMARY CROPS	GROWING CONDITION	HARVEST
01	Azerbaijan East & West provinces	Grapes, apple, walnut	Cool continental highland; long, bright autumns that concentrate sugars before harvest.	Aug — Oct
02	Mazandaran Caspian belt	Kiwi, citrus, fresh fruit	Humid subtropical strip between the Alborz range and the Caspian; the country's late-season fruit basket.	Oct — Dec
03	Khorasan Razavi & South	Saffron, barberry	Semi-arid highland with cold winters and dry autumns — the conditions saffron requires and few places offer.	Oct — Nov
04	Kerman Rafsanjan & Sirjan	Pistachio, dates	Arid high plateau with a wide day-to-night temperature range; the origin behind Iran's signature nut export.	Sep — Oct
05	Fars Southern valleys	Dates, citrus, grapes	Warm temperate valleys with a long growing season, supporting both stone fruit and date production.	Aug — Nov

ORIGIN IS A DECISION

Two orchards in the same province do not produce the same lot. The producer is chosen after the region.

SEASONS ARE HONEST

Harvest windows shift year to year with weather. We commit to dates we can actually hold.

COVERAGE EXPANDS

New regions enter the network when a specification justifies the assessment work behind them.

Growing conditions are described qualitatively. Harvest windows are indicative and confirmed per season before contracting.

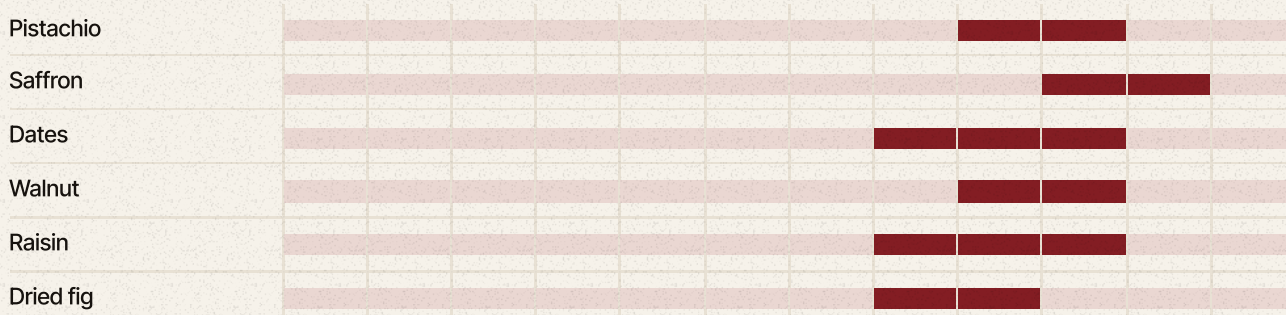

When each product is actually available.

Sourcing conversations are easier when both sides are looking at the same calendar. These are the windows we plan against.

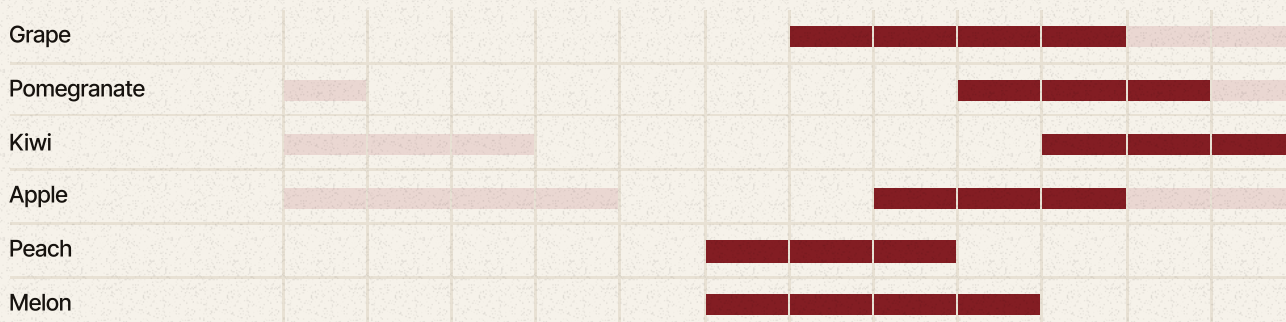

LEGEND HARVEST AVAILABLE FROM STORAGE YEAR-ROUND (PROTECTED CULTIVATION)

J F M A M J J A S O N D

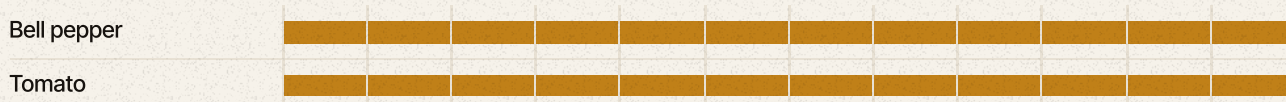

DRIED FRUITS & NUTS

FRESH FRUITS

FRESH VEGETABLES

CONTRACT AHEAD OF HARVEST

Capacity at the better producers is committed early. Peak-season volumes are best agreed before the harvest opens, not during it.

TWO CALENDARS, NOT ONE

The harvest window and your selling season rarely align. Variety choice, storage and switching origin are how we bridge the gap.

STORAGE IS NOT NEUTRAL

Product supplied from storage is available, but it is not identical to a fresh-harvest lot. We tell you which one you are buying.

Indicative windows for Iranian production, subject to season, region and variety. Greenhouse-grown vegetables are available year-round with seasonal peaks. Confirmed per enquiry.

Dried fruits & nuts

CATEGORY 01 / 03

Pistachio

KERMAN · SEP-OCT · THE SIGNATURE EXPORT

Grown on the arid Kerman plateau, where the day-to-night temperature swing drives shell split and kernel fill. Supplied by variety and calibre — Akbari, Ahmad Aghaei, Kaleh Ghouchi, Fandoghi — in-shell or kernel.

The category Iran is known for. Long harvest-to-export experience, established processing capacity, and grading conventions that international buyers already recognise.

Saffron

KHORASAN · OCT-NOV

Dates

FARS · KERMAN · AUG-OCT

Walnut

AZERBAIJAN · SEP-OCT

Raisin

AZERBAIJAN · FARS · AUG-OCT

ALSO SOURCED

Dried fig · peanut · dried mulberry · sunflower seed · watermelon seed · dried plum.

SPECIFIED BY

Variety, calibre or size grade, moisture, defect tolerance and treatment.

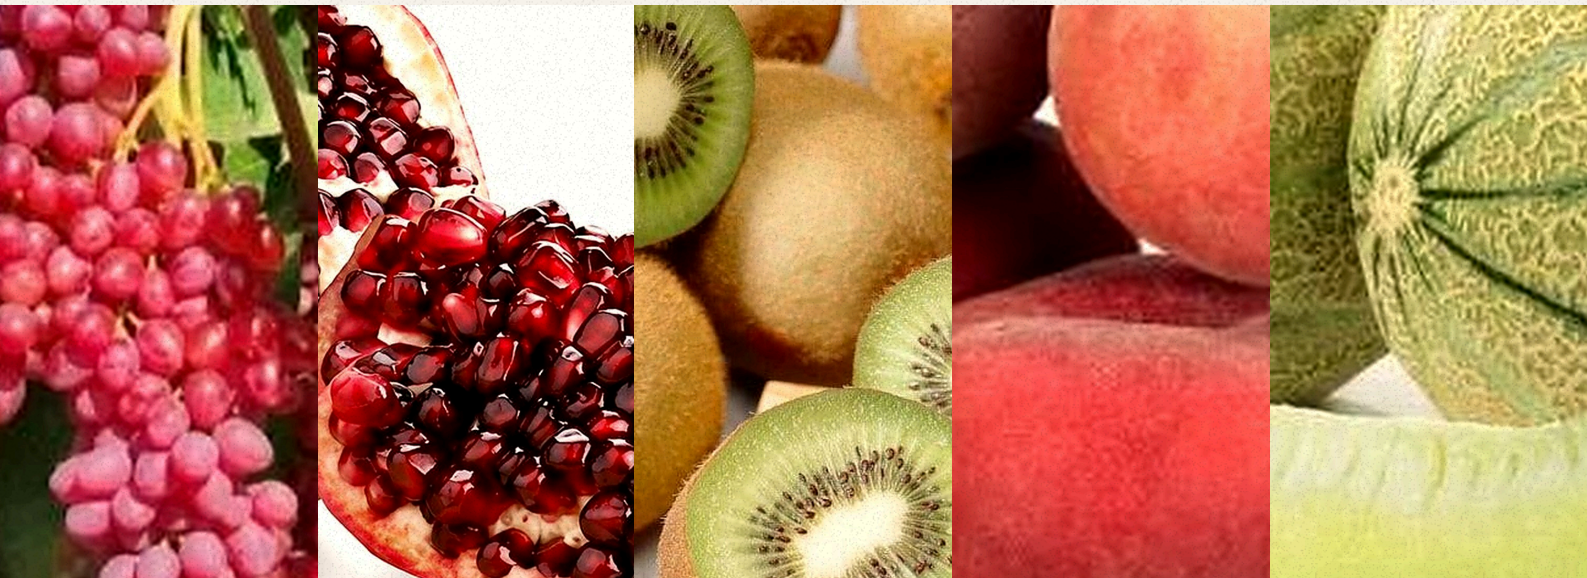

PACKED AS

Bulk cartons and sacks for processors; retail units under our brand or your private label.

Fresh fruits

CATEGORY 02 / 03

Iran's climate range means the fresh-fruit season does not close in autumn. Between the Caspian belt and the southern valleys, the country supplies across most of the calendar.

Grape

AZERBAIJAN · JUL-OCT

Pomegranate

FARS · SEP-NOV

Kiwi

MAZANDARAN · OCT-DEC

Peach

FARS · JUN-AUG

Melon

CENTRAL IRAN · JUN-SEP

ALSO SOURCED

Apple · watermelon · plum · citrus · seasonal varieties by harvest calendar.

SPECIFIED BY

Variety, size and colour grade, brix where relevant, and pack count.

HANDLED AS

Cold-chain from packhouse to port; carton and tray formats matched to the market.

Fresh vegetables

CATEGORY 03 / 03

Protected cultivation has changed what Iran can offer in vegetables. Greenhouse production runs through the year, which makes vegetables the category where continuity — not season — is the commercial point.

01

Bell pepper

Greenhouse-grown across colour grades. Available year-round with a cooler-season peak, sized and packed to the buyer's count per carton.

02

Tomato

Greenhouse and open-field production by variety and grade, including formats intended for onward processing.

03

Seasonal produce

Cucumber, aubergine, courgette and others sourced against the harvest calendar and the destination market's requirements.

04

Cold chain & programme

Vegetables are contracted as a rolling programme with agreed weekly or monthly volumes, and moved under temperature control from packhouse to port.

FIG. 04 — Bell pepper, sorted by colour grade before packing.

WHY VEGETABLES BEHAVE DIFFERENTLY

With protected cultivation the constraint moves from the season to the cold chain. Planning is agreed as a rolling programme rather than a single shipment — which is how most of our vegetable buyers work with us.

Full specifications, grades, packing formats and availability are set out in the Product Catalogue.

REQUEST ON ENQUIRY

GREENHOUSE PRODUCE

A

PAYA ORIGIN brand

Our own labelling, used where the buyer wants an origin-marked product without developing packaging of their own.

B

Private label

Your brand, your artwork, your market's language and compliance marks — produced to your specification.

C

Bulk & industrial

Unbranded bulk formats for processors and re-packers, specified by net weight and pallet configuration.

FIG. 05 — Palletised cartons staged for loading. Pallet configuration is agreed with the packing format, not improvised at the warehouse.

Four markets we are built to serve.

Our commercial focus is deliberately narrow. These are the markets whose requirements, routes and buying patterns we know well enough to commit to.

01	Middle East	GCC states and neighbouring markets. Short transit favours fresh fruit and vegetables where condition on arrival is the deciding factor.	Fresh fruit · vegetables · dates
02	Russia & CIS	Established demand for Iranian fresh produce, with volume concentrated in the months when local supply is out of season.	Fresh fruit · vegetables · dried fruit
03	India	A long-standing destination for Iranian dates, saffron and dried fruit, bought on specification and grade.	Dates · saffron · dried fruit
04	Europe	Sea-freighted shelf-stable categories, where documentation, traceability and consistent grading matter as much as price.	Nuts · dried fruit · saffron

HOW A MARKET IS ADDED

A new destination enters the list once we understand its import requirements, have a route we can hold, and have buyers whose specifications we can meet repeatedly. Until then it is an enquiry we will answer honestly, not a market we claim.

FIG. 06 — Dispatch. Freight is booked against a production plan, not after it.

What happens after you send an enquiry.

01

Enquiry

Product, grade, volume, packaging preference, destination port and target delivery window — as much as you have.

02

Sourcing proposal

Origin options with the trade-offs stated: what each region gives you on quality, timing and cost.

03

Sample & approval

Representative samples against the specification, so the standard is agreed on the product rather than on paper.

04

Contract & planning

Terms, schedule and packing fixed. Production is planned against the harvest window, not against optimism.

05

Inspection & documents

Pre-shipment inspection and the document set your import process requires, prepared before the container moves.

06

Shipment & follow-up

Delivery tracked to arrival, then reviewed — because the next season's programme is built on what this one taught us.

COMMERCIAL TERMS

FOB, CFR, CIF and DAP quoted on request, according to product, destination and the route being used.

LEAD TIME

Driven by harvest window, processing and packing format. Confirmed per order rather than promised in general.

FIRST ORDER

Trial volumes are welcome. Most long relationships here started as one container that arrived as described.

Send a specification — or ask us what a region can realistically supply this season.

SALE@PAYAORIGIN.COM

Trust is not created by words. It is
created by disciplined decisions and
consistent delivery.

Send us a specification, a target market and a delivery window — or simply ask what a region can realistically supply this season. We will answer with what is true, including when the answer is no.
